The Fund is suitable for investors:

- with medium to long-term** investment horizon;
- willing to assume risks associated with investing in securities with long duration (i.e. there will be no portfolio maturity limitation) and low or no credit ratings (i.e. there will be no minimum rating for the securities purchased or held by the Fund).

Notes:

* Income distribution (if any) will be reinvested.

** Medium to long-term refers to a period of at least three (3) years.

What am I investing in?

Fund Category	Bond.
Fund Type	Income and growth.
Investment Objective	The Fund aims to provide income* and to a lesser extent capital appreciation by investing primarily in bonds. <i>Notes: Any material change to the investment objective of the Fund would require unit holders’ approval.</i> <i>* Income distribution (if any) will be reinvested.</i>
Investment Strategy	The Fund seeks to achieve its objective by investing primarily in sovereign, quasi-sovereign and corporate bonds. There is no minimum rating for a security purchased or held by the Fund. This is to enable the Manager of the Fund to take a relatively high level of calculated credit risk for the Fund, justified by the relatively high level of expected return that could be generated by the Fund in return for taking the higher level of credit risk. In managing the Fund, the Manager may opt to invest in the investments either directly or via collective investment schemes. To construct the portfolio of the Fund, the Manager will analyze the general economic and market conditions. The Manager will also analyze and compare the fixed income securities in terms of expected returns against assumed risk by analyzing credit rating and duration of the fixed income securities, where the Manager will select securities that will deliver better returns to the Fund for a given level of risk. In addition, the Manager may also consider fixed income securities with favorable or improving credit or industry outlook that provide potential capital appreciation. The Fund’s investment is subject to active tactical duration management, where duration of the portfolio of the Fund will be monitored and modified according to interest rate outlook without any portfolio maturity limitation. The Fund may invest in fixed income securities with varying maturities. The Fund invests in Malaysia and to a lesser extent, in foreign eligible markets. The Fund is actively managed. However, the frequency of its trading strategy will depend on investment opportunities.
Asset Allocation	<ul style="list-style-type: none"> • 70% - 98% of the Fund’s net asset value (“NAV”) will be invested in bonds; • 0% - 28% of the Fund’s NAV will be invested in other permitted investments; and • At least 2% of the Fund’s NAV will be invested in liquid assets.
Base Currency	Ringgit Malaysia (RM).
Performance Benchmark	Quantshop All MGS Index. <i>(obtainable from: www.aminvest.com)</i> <i>Note: There is no specific index available in the market that is applicable for the Fund. What are the key risks associated with the Fund?

General risks associated with investing in a unit trust fund

Market Risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors resulting in a decline in a fund’s NAV.
Inflation Risk	This is the risk that investors’ investment in a fund may not grow or generate income at a rate that keeps pace with inflation.
Manager’s Risk	This risk refers to the day-to-day management of a fund by the manager which will impact the performance of a fund.
Non-Compliance Risk	This is the risk of the manager, the investment manager or the trustee not complying with their respective internal policies, the deed and its supplemental deeds, securities law or guidelines issued by the regulators relevant to each party, which may adversely affect the performance of a fund.
Loan Financing Risk	This risk occurs when investors take a loan / financing to finance their investment. The inherent risk of investing with borrowed money includes investors being unable to service the loan repayments.
Country Risk	Investments of a fund in any countries may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which a fund invests in.

Specific risks associated with the Fund

Credit and Default Risk	Credit risk relates to the creditworthiness of the issuers of the fixed income instruments and their expected ability to make timely payment of profit or interest and/or principal. Default risk relates to the risk that an issuer of a fixed income instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the fixed income instruments.
Interest Rate Risk	Interest rate risk refers to the impact of interest rate changes on the valuation of fixed income instruments. When interest rates rise, fixed income instruments prices generally decline and this may lower the market value of the Fund’s investment in fixed income instruments. The reverse may apply when interest rates fall.
Income Distribution Risk	The distribution of income is not guaranteed.
Currency Risk	As the investments of the Fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Note that the Fund also offers multiple currency classes. When the base currency of the Fund depreciates against the denominated currency of the Class(es), the Class(es) will suffer currency losses. This is in addition to any gains or losses derived from the Fund’s investments.

Liquidity Risk	Liquidity risk refers to the ease of liquidating an asset depending on the asset's volume traded in the market. If the Fund holds assets that are illiquid, or are difficult to dispose of, the value of the Fund and consequently the value of the Unit Holders' investments in the Fund will be negatively affected when it has to sell such assets at unfavourable prices.
Counterparty Credit Risk	Counterparty credit risk is the risk arising from the possibility that the counterparty may default or not able to fulfill a trade settlement prior or on the settlement date of the trade. This could adversely affect the value of the Fund.

Note: The abovementioned risks which investors should consider before investing into the Fund should not be considered to be an exhaustive list. Investors should be aware that investments in the Fund may be exposed to other unforeseeable risks from time to time. Investors are advised to consult their professional adviser. Please refer to the Prospectus under "Risk Factors" for further details on risks.

Please note that if you invest in units through a distributor via a nominee system of ownership, you will not be deemed a unit holder under the deed of the Fund.
