Best Case	Capital appreciation and income distribution.
Mid Case	No significant change in investment i.e. no capital appreciation and income distribution.
Worst Case	Capital loss and with no income distribution.

What are the key risks associated with the Fund?

General risks associated with investing in a unit trust fund

Market Risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's net asset value.
Inflation Risk	This is the risk that investors' investment in the fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.
Manager's Risk	This risk refers to the day-to-day management of the fund by the manager which will impact the performance of the fund. For example, any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the fund.
Non-Compliance Risk	This is the risk of the manager or the trustee not complying with their respective internal policies, the deed and its supplemental deeds, securities law or guidelines issued by the regulators relevant to each party, which may adversely affect the performance of a unit trust fund when the manager or the trustee takes action to rectify the non-compliance.
Loan/Financing Risk	This risk occurs when investors take a loan/financing to finance their investment. The inherent risk of investing with borrowed/financed money includes investors being unable to service the loan/financing payments.
Country Risk	Investments of the fund in any country may be affected by changes in the economic and political climate, restrictions on currency repatriation or other developments in the law or regulations of the countries in which the fund invests in. For example, the deteriorating economic condition of the countries may adversely affect the value of the investments undertaken by the fund in those affected countries. This in turn may cause the net asset value or prices of units to fall.
Suspension Risk	Refers to situation where the Manager suspends dealings of units in a fund (no redemption or subscription are allowed) under exceptional circumstances as set out in the Prospectus - Temporary suspension of determination of NAV and of the issue, switching and redemption of units. Suspension of a fund may potentially result in unit holders not being able to redeem their units into cash based on their liquidity needs and continue to be subject to the risk factors inherent in the Fund.

Specific risks associated with the Fund

Risk of a Passive Strategy	As the Fund adopts a passive strategy of investing a minimum of 85% of its NAV into the Target Fund at all times, this strategy would result in the Fund being exposed to the risk of its NAV declining when the Target Fund's net asset value declines.
Risk of not Meeting the Fund's Investment Objective	This is the risk that the Fund may deviate from the intended investment objective.
Currency Risk	As the Fund offers multiple currency Classes, certain Class(es) would be exposed to currency risk. This is the risk associated with investments in certain Class(es) of the Fund which is denominated in a currency different from the base currency of the Fund. When the base currency of the Fund depreciates against the denomination currency of certain Class(es), the Class(es) will suffer currency losses. This is in addition to any gains or losses derived from the Fund's investment in the Target Fund. In addition, it should be noted that the Fund's investment in the Target Fund may still be exposed to currency gains or losses resulting from fluctuations in foreign exchange rates between the base currency of the Target Fund and the other currencies which the Target Fund may be exposed to.
Income Distribution Risk	It should be noted that the distribution of income is not guaranteed. Circumstances preventing the distribution of income include, among others, insufficient realised returns to enable income distribution. Distribution of income (if any) should only be made from realised gains or realised income.
Liquidity Risk	The Fund will be investing a minimum of 85% of its NAV in the Target Fund. There may be exceptional circumstances, which could cause delays in the redemption of shares of the Target Fund and units of the Fund.
Taxation Risk / Withholding Tax Risk	This is the risk that the proceeds from the sale of securities and/or the receipt of income may be subject to tax, levies, duties or other charges imposed by the authorities in Luxembourg.
