Fund Factsheet October 2024

Precious Metals Securities

Fund Overview

Investment Objective

Precious Metals Securities (the "Fund") aims to achieve capital appreciation by investing in a portfolio of global Shariah-compliant equity and Shariah-compliant equity-related securities (including, without limitation, Islamic depository receipts, but excluding Shariah-compliant preferred shares and sukuk), of companies engaged in activities (exploration, mining and processing) related to gold, silver, platinum or other precious metals or minerals.

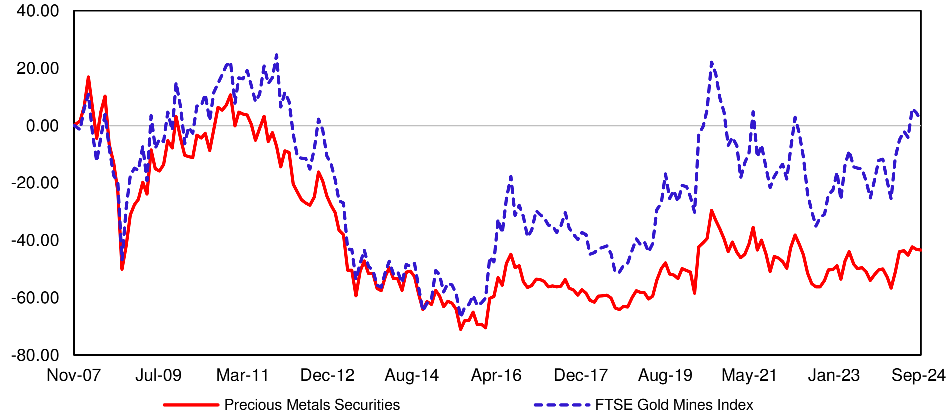
The Fund is suitable for investors:

• seeking global investment strategy that conforms to Shariah principles.
• seeking potential medium to long-term* capital appreciation.
• willing to invest in gold, silver, platinum and other precious metals equities, and their related equities.

Note: *Medium to long-term refers to a period of at least three (3) years.
Any material change to the investment objective of the Fund would require Unit Holders' approval.

Fund Performance (as at 30 September 2024)

Cumulative performance over the period (%)



Past performance is not necessarily indicative of future performance. Unit prices and investment returns may go down as well as up.

Target Fund Manager's Commentary (as at 30 September 2024)

•During the month of September, Silver, Platinum, Gold, and Palladium each had positive returns of 7.95%, 5.60%, 5.24%, and 3.47%, respectively.
•Gold and precious metals equities, as measured by the S&P BMI Gold and Precious Metals Index (non-Sharia compliant), gained 3.51% during the period.
•Gold ETFs had net inflows of 0.37mm oz, or about 0.4% of total known gold ETFs. This was the fourth consecutive month of inflows, but total holdings remain below levels seen a year ago.

Current Gold & Precious Metals Themes
Precious Metals saw prices rise in September, with Silver performing the best and Gold making new all-time highs over the course of the month. Palladium and Platinum prices also moved higher. Silver's surge was fueled by stimulus and rising breakeven inflation, while output from Mexico looks to decline for the second year in a row. The Fed cut and dovish outlook has bolstered gold prices, which remain resilient amid geopolitical tensions and discussions around de-dollarization.

Palladium and Platinum prices also moved higher as expectations of a supply/demand deficit for 2024 widened. The move higher was positive in the face of a drop in physical ETF holdings.

In Central Bank activity, the big news was a 50 basis points (bps) cut by the Fed on September 18th. The Fed's self-described "recalibration" of policy was seen to address recent weakness in the labor market over the threat of inflation, which has been trending in the right direction. The market has continued to price in additional easing from the Fed, with the biggest open question being whether the move in November will be 25 or 50 bps. The European Central Bank (ECB) cut its main policy rate by 25 bps a week earlier, its second such move this year as the flash read of inflation in the eurozone was 2.2% in August and expected to trend even lower during September. The ECB is widely expected to cut rates by 25 bps at the conclusion of their October meeting. The Bank of England (BOE) opted not to cut rates in September, following a cut on the final day of July, but is expected to provide further easing at its November meeting. Meanwhile, the Bank of Japan (BoJ) has held rates steady after two 25 bps increases earlier this year, and it is unclear when or if they will look to raise interest rates further.

In geopolitical events, a debate was held between U.S. presidential candidates, Donald Trump and Kamala Harris, but no clear frontrunner to win the election has emerged, and there is a chance the outcome of the election won't be known until well past the election date, sowing uncertainty in U.S. politics. The Ukraine-Russia conflict remains ongoing, with both sides striking and making further progress into one another's sovereign borders. In the Middle East, Israel attacked Hezbollah members through both covert measures (including exploding pagers) and traditional air strikes, killing Hezbollah's most senior military commander, and appeared on the cusp of invading Lebanon, adding to additional tension in the region.

Looking ahead there are still a number of important events (and unknowns) for the remainder of 2024 and into 2025. How many times the Fed cut rates this year and next remains open for debate. The U.S. presidential election in November will bring policy changes, domestic and foreign, regardless of the winner. Does the U.S. economy achieve a soft landing and avoid recession, and will we see economic rebounds out of Europe and China? And these are just a few of the uncertainties we have yet to navigate.

What does the future hold for gold?
Gold has had a strong run since finding a floor last October, buoyed by central bank buying, prospects of potential Fed rate cuts, and a de-dollarization wave. We expect central bank gold buying to continue at higher prices, albeit at a slower pace. Retail purchases of gold have also been strong in the Asia Pacific region, both for jewelry purposes and as a store of wealth, especially with declining property values in China. Japan also saw notable inflows to gold with prices attractive on a local basis again. On the other hand, known holdings of physical gold in ETFs have fallen over the past year. The U.S. dollar has strengthened year-to-date, taking short breathers in May and July as investors considered a second potential cut by the Fed this year. We expect the future direction of the price of gold to be tied to the pace of the Fed easing along with the corresponding movement in the U.S. dollar. A weaker dollar, often a consequence of easing monetary policy, historically acts as a tailwind for gold, boosting its haven appeal and attracting capital away from the greenback. This dollar depreciation, coupled with anticipated Fed cuts later in the year, could propel gold prices to sustained levels above $2,500, with silver also likely to benefit from its industrial applications. We expect Precious Metals to be more resilient than industrial metals in this environment. In precious metals, we expect the price of Gold to climb given current expectations on the Fed's rate trajectory path and as we see signs of ex-China investors reallocating back to gold as a hedge for any potential recessions. Gold continues to be an attractive safe-haven and should see support due to geopolitical risks in Ukraine and the Middle East. We still see strong interest from central banks to increase gold holdings as an alternative currency reserve, which should limit the downside for gold. Medium-term fundamentals for Silver remain constructive, with expected deficits in 2024 and 2025. We remain bullish on both gold and silver.

The Platinum Group Metals (PGMs) remain tight in the physical markets, and Palladium could benefit from a potential short squeeze as short interest remains significantly high. We also expect to see some production curtailments due to low metal basket prices. Electric vehicle (EV) adoption has slowed globally, while PGM-using plug-in hybrids and extended-range vehicles have gained traction. We also see incentives for EVs being removed (or new tariffs added), which should lead to greater production of internal combustion engine vehicles or hybrid models, which has led to automakers slowly beginning to review their approach and return to the Palladium forward markets. Also contributing to the outlook for demand was the announcement by the Finance Ministry of Russia that they would be adding Platinum and Palladium to their list of precious metal purchases, which is maintained for liquidity purposes.

Consolidation Fever: Why M&A Could Be Mid-Cap Gold in 2024
Despite historical concerns about high debt levels among gold miners, many now have improved balance sheets and exceptionally strong margins thanks to soaring metal prices. However, many haven't invested adequately in finding new gold deposits, potentially jeopardizing future production growth. This opens the door for potential consolidation in 2024. With valuations, particularly in mid- and small-cap equities, still lagging their larger counterparts, the stage is set for potential mergers and acquisitions, and we are already seeing the announcement of some deals. Larger miners, flush with cash and facing limited organic growth opportunities, may look to acquire exploration-focused mid-cap companies or consolidate existing assets, propelling a wave of deals across the sector. This presents savvy investors with the chance to unlock significant value, especially in undervalued mid-cap equities poised to be absorbed by bigger players. In a gold market poised for both growth and consolidation, we meticulously select established producers who, unlike many peers, have already invested in securing future production. They now enjoy falling capital expenditures as cash flow and production steadily climb, all while demonstrating exemplary cost control and consistent target-beating. These companies, boasting ample reserves and long mine lives, are prime targets in the predicted mid-cap M&A wave. As larger players seek established growth, these producers stand to be acquired at a premium, unlocking significant value for our investors. While the market might bask in the general upward trend, our focus on proven winners, operational efficiency, and future-proofed reserves positions us to deliver alpha as the gold story unfolds.

The outlook for gold miners has risen alongside gold spot price over the past year. While share prices have risen, they haven't maintained pace with gold price. Gold miners faced pressure from rapid cost expansion in the past 2 years, keeping margins subdued and valuations low. Cost inflation; however, has stabilized in 2024 while gross margins and free cash flow yields have risen on account of rising gold and silver prices. Current spot prices imply high upside for gold miners at today's valuations, creating a very favorable outlook for the sector. The gold mining sector is still lacking in names that can boast a strong growth profile past the one- to two-year time horizon. A lack of recent investment in growth and discovery may cause companies to face shrinking production as large miners continue to seek growth through M&A of smaller names instead of discovery.

Sector Performance and Positioning
•During the month of September, the fund gained 4.69% in USD.
•The top 3 individual contributors to the fund were Centamin plc, B2Gold Corp., and Endeavour Mining PLC.
•The top 3 detractors were Anglogold Ashanti PLC, Westgold Resources Ltd, and Kinross Gold Corporation.
